

WORKING TOGETHER TO PROTECT AGRICULTURAL LAND

Trans-Northern Pipelines Inc. (TNPI) operates pipelines throughout Alberta, Ontario, and Quebec. There are numerous farms and ranches along TNPI's pipeline route. In these areas, we work closely with the landowners to ensure they can conduct their daily activities safely while protecting the safety of the pipeline.

Approval is required for any activity that causes a ground disturbance along the pipeline right-of-way or within 30 metres measured on either side from the pipeline centre (called the "prescribed" or "controlled area" depending on where you live). Where there is more than one pipeline in the right-of-way, the prescribed area is measured from the outermost pipelines on each side. These activities include, but are not limited to the following at or below 45 cm:

- Planting, landscaping or clearing land, trees, stumps or shrubs
- Putting up a fence, poles or posts
- Augering
- Altering depth of soil
- Deep tillage
- Installing drainage or irrigation systems
- Drain tiling
- Trenching
- Ditching or ditch clearing
- Installing pools, retaining walls, sheds or other structures
- Digging, excavating or quarrying
- Digging manure/burrow pit
- Land leveling, grading, road, parking lot, parking pad or laneway building

If you are uncertain about a given activity, contact us. For your safety and the safety of your community, your land, and the environment, **never assume the depth of the pipeline or the location of other underground utilities in the area.**

Prior to your work commencing (and depending on your area), either **Utility Safety Partners (Alberta)**, **Ontario OneCall**, or Quebec's **Info-Excavation** will notify us should your work be in the vicinity of our pipeline. We will contact you within three working days to verify that the work can be done safely, and discuss any approvals that might be required.

Before doing work, ensure it is safe to dig. Get a FREE locate – 24 hours a day, seven days a week – to confirm the location of our pipeline and other utilities before you dig.

ALBERTA
utilitysafety.ca

These services will contact us on your behalf and we will contact you to provide the location of the pipeline and discuss your project. For the safety of you and your community, you must wait until you have heard from us and from other utilities in the area before beginning your work.

DOES YOUR WORK ALSO INVOLVE THE USE OF HEAVY MACHINERY NEAR THE PIPELINE?

In some circumstances, heavy machinery can be used near a pipeline. For example, vehicles or mobile equipment can operate across pipelines if:

- Operated within the travelled portion of a public road or highway
- The loaded axle weight and tire pressures of the vehicle are within the manufacturer's approved limits and operating guidelines
- The area has not been identified by us as an area where operating vehicles or equipment could impair the safety or integrity of the pipeline

These conditions apply to vehicles or mobile equipment used for agricultural activities in the production of crops and the raising of animals, and includes pasturing and cultivation activities such as tillage, plowing, disking, and harrowing.

But, some farm activities can endanger the safety of the pipeline and therefore require approval prior to commencing work.

Approval is required if you are using any of the following equipment within 30 metres of the pipeline:

- Auger
- Fence post pounder
- Deep tillage, ripper or other tiling equipment
- Grain truck
- Grader
- Trencher
- Super B train
- Haul truck
- Trailers carrying heavy load
- Laser leveler
- Skid steer
- Tree spade
- Backhoe

If so, contact us at crossingrequestseast@tnpi.ca, in Ontario and Quebec, or crossingrequests@tnpi.ca, in Alberta, to secure a crossing agreement. We will provide assistance through the permit process, ensuring the project proceeds safely and efficiently.

When you contact us, we will:

- Verify the location of the pipeline¹ and right of way limits so everyone knows where the pipeline is located²
- Discuss permit requirements
- Issue consent or explain why consent cannot be issued, and visit the site to mark the pipeline
- Send an inspector, if needed

If you're excavating near a pipeline, you must give the pipeline company 24 hours' notice before backfilling over the pipe. The pipeline company may require that an authorized representative be on site, or provide specific instructions about how to backfill over the pipe.

Not only is it the law to secure approval, damaging a pipeline can pose immediate danger to people and the environment. Failure to secure a permit/crossing agreement can result in financial penalties to both companies and individuals for non-compliance through the *Canadian Energy Regulator Act*.

Has your agricultural land use changed?

Please let us know by contacting us by email at info@tnpi.ca or using our website's contact form found under "Contact Us" and include details on how we can best reach you with any questions you may have.

About the CER/AER

For more information regarding the regulator and the regulations to protect the pipeline, please visit:
